Outlook For Mac 2011 Issues

This address is usually provided by your Exchange administrator. It represents exactly what is on your Exchange server. Instead of telling our young people to plan ahead, we should tell them to plan to be surprised. Set up an Exchange account. Open Outlook for Mac 2011. On the Tools menu, click Accounts. If this is the first account you're creating in Outlook 2011, under Add an Account, click Exchange Account. The OWA website is different for each Exchange server setup, but it's not commonly the address located inside Outlook 2011.

Outlook supports both POP and IMAP accounts. To learn more about each account type, see POP account basic settings and IMAP account basic settings. If the calendar events appear correctly there and in Outlook, it tells us that Outlook is communicating with Exchange correctly and Exchange is storing the information correctly.
